CENOZON

InSight

Microsoft Partner

Advanced analytics for ILI data.

Cenozon's InSight equips operators with a specialized tool for managing and interpreting In-Line Inspection data, featuring an interactive GIS interface and efficient data management to revolutionize your workflow.

The InSight Advantage | Modern Solutions for a Modern Industry

InSight is built on decades of expertise in pipeline and asset integrity, incorporating innovative features like Automated Multi-Run Feature Matching and advanced analytics to interpret in-line inspection data. This software enables operators to conduct cluster analysis, detect defect trends, and achieve a comprehensive, real-time view of their entire pipeline network — inside and out.

Features and Benefits

Analytical tools

Advanced analytical tools allow predictive interpretation of inspection data, so you know what's happening now, and in the future.
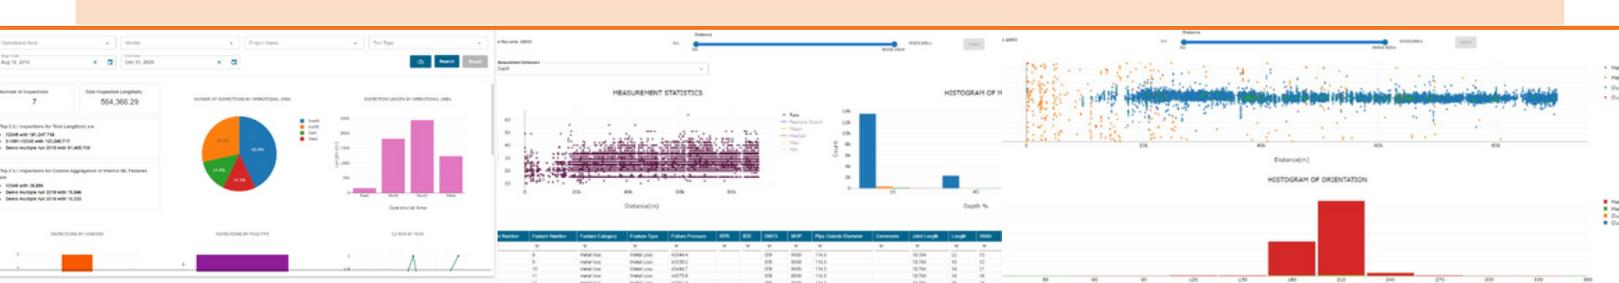

GIS integration

GIS integration allows you to visualize your entire pipeline and riser network, and tools such as automated flyover help you see more than just data.

Data processing

Automatic data processing allows for greater data reliability and increased confidence in data interpretation.

Reporting Tools

Comprehensive reporting tools help you to integrate InSight into your corporate hierarchy, and share analysis company wide.
